Legacy DECORATIVE
CONCRETE
SYSTEMS
A DIVISION OF SOLOMON COLORS, INC.

Legacy® resurfacing products quickly rejuvenate concrete surfaces inexpensively and without significant disruption. Instead of removing old concrete to repour a new slab, a layer of overlay can be applied to the surface and then enhanced with stains, coatings, integral color or our line of textured stamps. Rejuvenating surfaces with Legacy® Overlays reduces the need for virgin materials and the amount of waste produced simultaneously. In addition, our overlays contain fly ash, a post industrial recycled material that reduces the environmental impacts of producing traditional cement and strengthens the final product. In this document find details about these attributes and more.

RECYCLED CONTENT

Material	Post Industrial Recycled Content	Potential Regional Materials (see next page for locations)
Artisan Overlay™	XX%	75%
Venetian Microtopping™	XX%	45%
Perfetto Espray™	XX%	66%
